

FOR IMMEDIATE RELEASE:

eProduce recommends Microscan MS-860 laser scanner

RENTON, WA, May 2009 — eProduce, fresh produce business process management, tracking and tracing software, has recommended **Microscan's MS-860 Industrial Scanner** as the preferred barcode scanner for fresh produce product GS1 Databar, GTIN and SSCC barcode hardware for retail, trade and logistic units labeling.

"Fresh produce supply chain firms have discovered that eProduce is a cost effective, essential tool to help them effectively meet recent government compliance requirements. By recommending superior hardware and software barcoding solutions, we are proud to continue to help companies meet GS1 compliance, which when implemented will effectively help to reduce or possibly eliminate fresh produce product category recalls," states Anderson Grogen Sr., CEO of The Next Version Software.

For fixed barcode scanners/readers, eProduce is endorsing the **MS-860 Industrial Raster barcode scanner**. On the fresh produce production line, this high speed barcode scanner uses wide sweeping angles to allow for maximum flexibility in scanning labels that may be adhered in different locations or include multiple symbols. "By using eProduce and product barcoding solutions recommended by eProduce, fresh produce packing facilities, wholesalers and distributors are able to effectively meet requirements, while also implementing 'best practice solutions'," concludes Grogen Sr.
