Visionscape GigE: Integrated GigE Vision Solution

From an economical single camera system to a sophisticated eight camera application, Omron Microscan’s Visionscape GigE Solution contains all necessary components for a complete, successful machine vision implementation.

PC-based Gigabit Ethernet systems leverage standard network components such as cabling, switches and interface cards. Visionscape GigE supports a complete set of Omron Microscan machine vision GigE cameras which, in combination with Visionscape software, allows for rapid deployment of any scale of machine vision solution.

**Gigabit Ethernet (GigE)**

Gigabit Ethernet allows for high speed data transfers at one gigabit per second. With the Visionscape GigE solution, this system can be easily deployed using standard low-cost network components, long cable lengths and no frame grabber boards.

**Flexible Configuration**

Visionscape GigE cameras feature C-mount optics, and built-in strobe and trigger connections. A wide variety of sensor resolutions are available, ranging from VGA to QUXGA (8 MP), with CMOS, CCD, and color options.

**Compact and Lightweight**

Most Visionscape GigE cameras weigh less than 4 oz. with a small form factor to allow flexible positioning in tight spaces or mounting in robotic applications.

**User Interfaces**

Visionscape FrontRunner engineering user interface enables quick and easy creation of complex vision applications. The AppRunner runtime interface provides complete system status, application monitoring and results.

**Application Examples**

- Assembly verification (automotive, medical devices, packaging)
- Print quality inspection (pharmaceutical, other)
- Package quality inspection (food and beverage)
- Component presence/absence checking (electronics)
- Part location (robotics, machine builder)
- Part identification (automotive, electronics, packaging)
